

## Cryoshape, three integrated actions to shape your silhouette

### CRYOGENIC ACTION

### VIBRATORY ACTION

### PHOTO-STIMULATION ACTION

The Cryoshape handpiece is applied to the area to be treated and the treatment begins.

The temperature of the subcutaneous fat decreases considerably (cryogenic action).

Before and after the treatment, the handpiece is activated in vibrating mode, encouraging the drainage and mobilisation of the fatty deposits (vibratory action).  
An LED light is applied over the treated area to improve elasticity of the treated tissues (photo-stimulation action).

## THE TRIPLE INTEGRATED SYSTEM TO SHAPE YOUR BODY

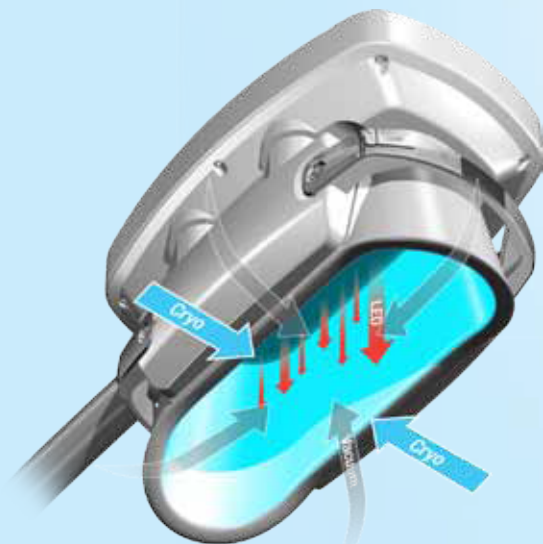

### WHAT IS IT?

Cryo Shape is a new and sophisticated machine which uses a non-invasive and highly tested technique to treat localized fat deposits in a selective manner. The Cryo Shape cryogenic system is automatically controlled and is able to lower the temperature consistently; the Vacuum technology, with adjustable intensity, can be used in constant or pulse mode, together with the emission of LED light at 760 nm, to improve elasticity of the treated tissue.

### HOW DOES IT WORK?

Through suction of localised fat deposits and a decrease in temperature, the Cryo Shape treatment results in the gradual reduction of adiposity.

A complete treatment lasts one hour and the results can be seen between 15 and 20 days after the first session.

### SMALL AREA PROMOTION

*(knees or outer thigh area)*

WITH A FREE BODY CREAM

### MEDIUM AREA PROMOTION

*(hips or waistline)*

WITH A FREE BODY CREAM

### LARGE AREA PROMOTION

*(abdomen or areas with extensive fat deposits)*

WITH A FREE BODY CREAM

The Cryo Shape treatment is completely painless; you may feel a very light tension of the tissue due to the vacuum effect, that will slowly diminish thanks to the cold effect.

### THE RESULT?

Visible reduction of the adipose layer

3 sessions, at monthly intervals, are sufficient to shape a silhouette, depending on customer demands, and achieve results that last up to an average of 8/10 months.
